NOTES:							
As of the date of this report (December 4, 2019) the cause/causes of e-cigarette/vaping-associated lung injury (EVALI) have not been determined.							
Data are current as of November 22, 2019 and are subject to change. Data will be updated monthly.							
Investigation into suspect and confirmed/probable cases of EVALI in Massachusetts is ongoing.							
Product names, sources, and contents are as reported by cases during interviews and cannot be independently verified.							
DPH cannot make specific claims about the role of any individual product, whether named or not named, in cases of EVALI.							
DPH recommends avoiding the use of all vaping products until more is known about the cause/causes of EVALI, and continues to advise not using tobacco products due to their known cancer-causing and other health effects.
